Important safety information

This software can cause irreparable problems, with a bad use of it. An appropriate selection of files to be backed up will be essential to avoid any conflict with your system.

The application

The application is a software program that ensure the privacy of the copied data because it has no link with any of our server and we do not collect any data we can ensure that with our terms of agreements.

How does the application work?

It's simple to use all the buttons are labeled with a clear name or action that they are doing.

Is the application in a portable state?

Yes, the application can be used directly using a .exe file.

What is the application capable of copying?

The application can copy every type of files, including the content of the directories inside the root directory.

What can the application encrypt?

The file can encrypt anything that can be opened with notepad.exe, as .txt/.json/.xaml files.

Can I remotely have a view of what is being copied?

Yes, absolutely thanks to the server connection button in the settings.

Once the save work is launched just launch the client and everything appears.

Usage

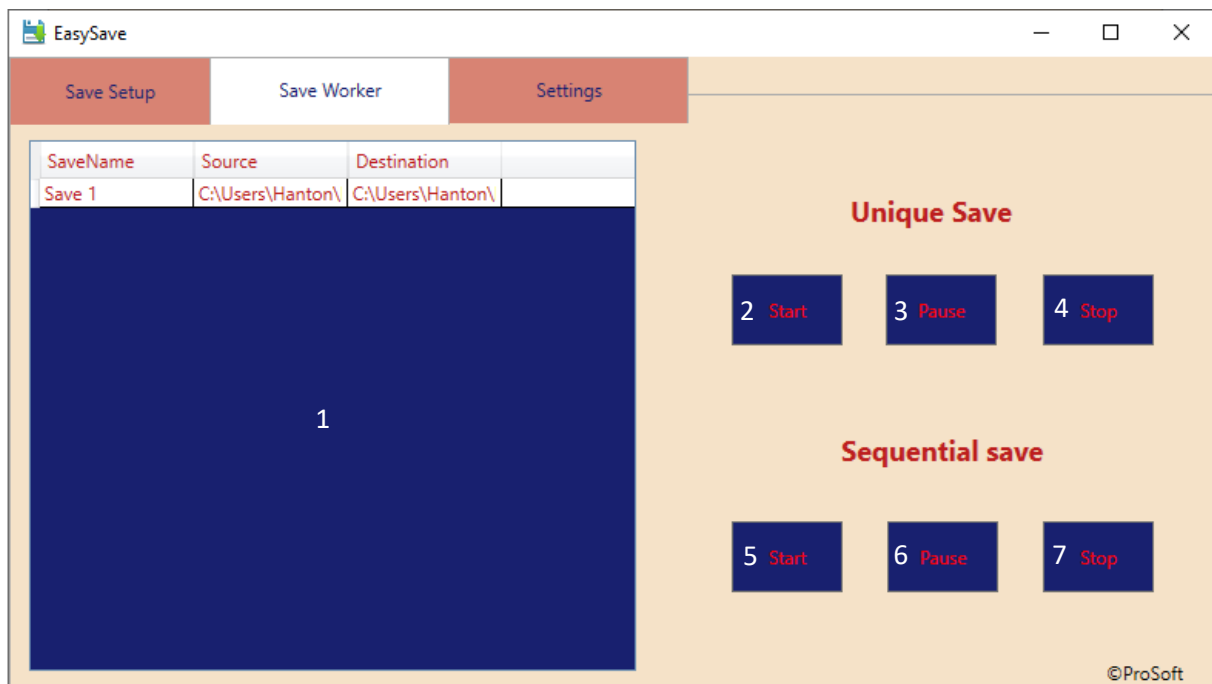

This is a simple guide on the buttons and boxes with a little explanation of how it does work.

1st tab:
